

Optical Binocular Colposcopes may be causing your aches and pains...

OSHA studies have shown that microscope and binocular use increases the percentage of neck, shoulder, lower back, hand and finger aches, as well as eyestrain and headaches because users are forced into an unusual position. Strain to the visual system as well as the musculoskeletal system occurs when using a microscope. Because of similar positioning, these same ailments affect users of binocular colposcopes.

A recent survey was sent to determine discomfort while using binocular systems:

<u>Type of Pain or Discomfort</u>	<u>*% of Users Reporting Discomfort</u>
Neck	50-60%
Shoulders	65-70%
Back	70-80%
Lower Back	65-70%
Lower Arms	65-70%
Wrists	40-60%
Hands and Fingers	40-50%
Legs and Feet	20-35%
Eyestrain	50%
Headaches	60-80%
